Department has Career Pathways Managers (who replaces the old Apprenticeship Brokers) & a new SACE Achievement Officer.

With this new strategy, the Department has updated processes for School based Apprenticeships as there are no longer Apprenticeship Brokers and a new SACE Achievement Officer.

Thank you to all of the schools and staff who have contributed to this semester's newsletter, and Continue...
The South Australian Maritime School, Le Fevre High School, invited 14 students and 3 staff with an interest in Maritime Engineering to a three-day visit to the Australian Maritime College (AMC). The visit was designed to provide students with an understanding of the opportunities available in the maritime industry and an insight into the learning environment at the AMC.

Day one took the students to the Australian Maritime College (AMC) to get an understanding of the world-class facilities that were available. The morning began with a tour of the campus and a presentation on the academic and professional courses available at the AMC. This was followed by a demonstration of the simulation centre’s use to help students understand life at sea. The highlight of the day was the visit to the state-of-the-art simulation centre, where students experienced the reality of maritime training.

On day two, the students were divided into six groups and given a day-long experience to prepare them for life at sea. The students were given the opportunity to experience different roles on board a ship, including engineering, navigation, and communications. They were also given the chance to participate in hands-on tasks, such as running a life ring before boarding the ship.

Day three took us to the world-class simulators the AMC has to offer. The students were split into six groups and given the opportunity to experience different roles on board a ship, including engineering, navigation, and communications. They were also given the chance to participate in hands-on tasks, such as running a life ring before boarding the ship.

The students were also given the opportunity to see the three different AMC campuses firsthand. They enjoyed visiting the Australian Maritime College in Launceston and the world-class facilities it has to offer. The opportunity to visit the AMC was a highlight for the students, as they immersed themselves in this opportunity to use the equipment in AMC’s world-class facility.

The students also had the opportunity to experience the survival centre, a facility that allowed them to learn the basics of survival if an emergency ever occurred at sea. This centre was a difficult strait located between Cape York and the Torres Strait Islands. The students were able to learn about the challenges of sailing in this area and how to survive in such environments.

The AMC’s world-class facility also offered students the opportunity to learn about different types of fires and how to extinguish them at this training facility. This was a valuable experience as students were able to learn about the importance of fire safety in maritime environments.

It was also exciting to meet an old scholar from Woodville High School, Brian, who is a chemical engineer. He shared his experiences with the students and explained how the chemical industry had changed over the years. He also shared his experiences with the students and explained how the chemical industry had changed over the years. He also shared his experiences with the students and explained how the chemical industry had changed over the years. He also shared his experiences with the students and explained how the chemical industry had changed over the years.

The students were also given the opportunity to learn about the different processes involved in building the first concrete road in South Australia. They were also given the chance to participate in hands-on tasks, such as mixing concrete and understanding the science behind it.
